

How it works

Solar electric systems, also called photovoltaic (PV) systems, use sunlight to produce electricity.

Your questions answered

Will I have electricity at night or when it's cloudy outside?

Yes. Even though solar panels do not generate energy when the sun is not shining, you are still connected to your utility company.

How long will it take contractors to install solar panels at my building?

Install time will vary but you can reach out to your property manager or reference the SOMAH Install Timeline to help you track the installation of the solar panels.

Will I have electricity when the power goes out?

The system does not run on battery storage, this means you will not have electricity during a blackout/power outage.
